

# Omni6D: Large-Vocabulary 3D Object Dataset for Category-Level 6D Object Pose Estimation

Mengchen Zhang<sup>1,2</sup>, Tong Wu<sup>3</sup>, Tai Wang<sup>2</sup>, Tengfei Wang<sup>2</sup>, Ziwei Liu<sup>4</sup>, Dahua Lin<sup>2,3</sup>

<sup>1</sup> Zhejiang University, <sup>2</sup> Shanghai Artificial Intelligence Laboratory,  
<sup>3</sup> The Chinese University of Hong Kong, <sup>4</sup> Nanyang Technological University

# Motivation

- **Category level object 6D pose and size estimation:** Given an RGBD image  $I$  and the category  $c$  of the object instance in the image, estimate the direction  $R$ , position  $T$ , and size  $S$  of the object in three-dimensional space.

## Autonomous Driving

Assist in Vehicle Perception and Path Planning

## Robot Operation

Improve the Robot's Grasping and Operating Capabilities

## Virtual/Augmented Reality

Enhance the Interactivity and Realism of Virtual Objects with the Real Environment

# Contribution

- ❑ Limited category numbers
- ❑ Lack of instance diversity within categories
- ❑ Overly simplified scenes
- ❑ Lack of realism

## NOCS

# Contribution

- ✓ **Expansion** of object categories from limited 6 to 166
- ✓ **Complex scenarios** (occlusions, changing lighting conditions, complex backgrounds, and varying viewpoints)

## Omni6D vs Others

| Datasets               | Mode | Realism      | # Categories | # Instances  | # Images    |
|------------------------|------|--------------|--------------|--------------|-------------|
| ShapeNet-SRN Cars [22] | RGB  | Synthetic    | 1            | 3514         | -           |
| Sim2Real Cars [22]     | RGB  | Real         | 1            | 10           | -           |
| CAMERA [40]            | RGBD | Synthetic    | 6            | 1085         | 0.3M        |
| REAL [40]              | RGBD | Real         | 6            | 42           | 8k          |
| Wild6D [44]            | RGBD | Real         | 5            | 1722         | 1M          |
| <b>Omni6D</b>          | RGBD | Real-Scanned | <b>166</b>   | <b>4,688</b> | <b>0.8M</b> |

## Omni6D

# Dataset

(a) Omni6D Dataset

(b) Shape Priors

(c) Symmetry Annotation

# Dataset

# Challenges

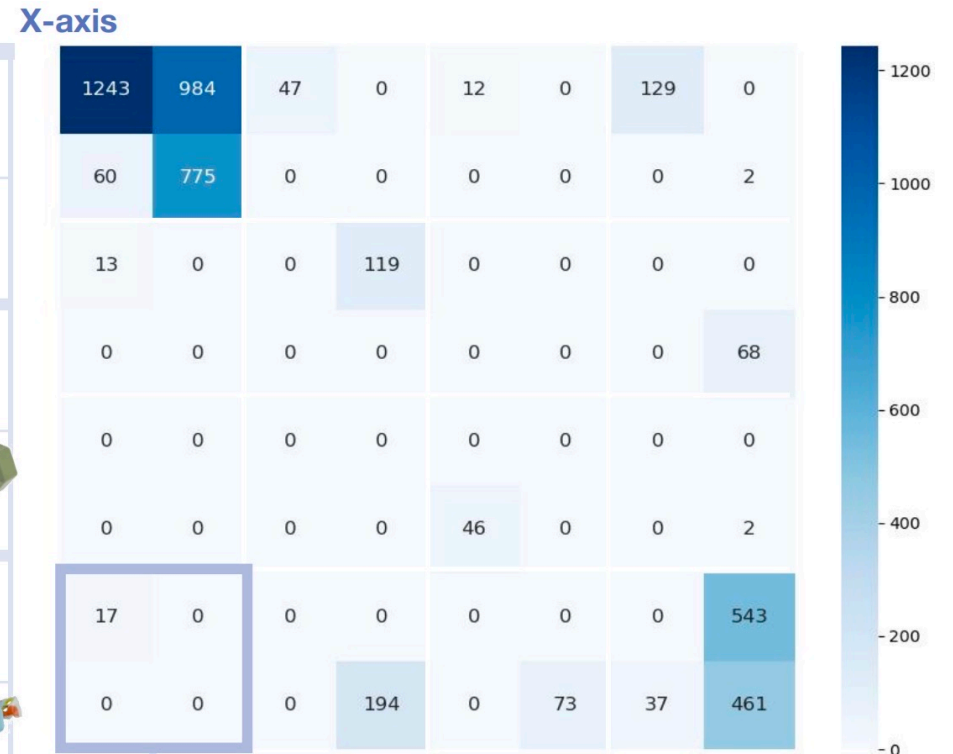

(a) Challenges from occluded object

(b) Challenges from bottom views

# Dataset

# Symmetry statistics

|       |       |
|-------|-------|
| Sym-0 | Sym-1 |
| Sym-2 | Sym-3 |

Structure remains unchanged under

- Sym-0: no rotation
- Sym-1: any degree of rotation
- Sym-2: multiples of 90-degree rotations
- Sym-3: multiples of 180-degree rotations around an axis

---

**Algorithm 1** Compute Our Symmetry-Aware Metric  $L_s$ 

---

```

1: procedure SYMMETRIC_METRIC( $L, R, n_x, n_y, n_z$ )
2:    $\Theta_0 = \{0^\circ\}$ 
3:    $\Theta_2 = \{0^\circ, 90^\circ, 180^\circ, 270^\circ\}$ 
4:    $\Theta_3 = \{0^\circ, 180^\circ\}$  // Rotations around Sym-1 axis need not be considered.
5:    $c = \text{count}(1 \text{ occurrences in } \{n_x, n_y, n_z\})$ 
6:   if  $c \geq 2$  then // The object is a sphere.
7:      $L_s = L(R^*, R)$ 
8:   else if  $c == 1$  then // Rotations around Sym-1 axis can be disregarded.
9:     Without loss of generality, assume  $n_x == 1$ .
10:     $L_s = \min_{\theta_y \in \Theta_{n_y}, \theta_z \in \Theta_{n_z}} L(R_{\theta_y, \theta_z}^*, R)$ 
11:   else if  $c == 0$  then // Simply enumerate all cases.
12:     $L_s = \min_{\theta_x \in \Theta_{n_x}, \theta_y \in \Theta_{n_y}, \theta_z \in \Theta_{n_z}} L(R_{\theta_x, \theta_y, \theta_z}^*, R)$ 
13:   end if
14:   return  $L_s$ 
15: end procedure

```

---

# Benchmark

**Table 2: Category-level performance on Omni6D dataset.** Models are trained on  $\text{Omni6D}_{train}$  and tested on  $\text{Omni6D}_{test}$ . Instances within each category in the test set are unseen during training, substantiating the algorithms’ capacity to generalize within individual categories under large-vocabulary settings. **Bold** and underlined results indicate the best and second-best performers.

# Dataset

# Omni6D-Real

- ✓ Omni6D-Real, comprising 30 scenes, 39 categories, 73 instances, and 1k images
- ✓ We captured RGBD images with Azure Kinect DK and preprocessed them using SAM for object masks and ICP for point cloud registration.
